

Kimber®

Continuing the Legacy™

## Kimber Quality.

A commitment to manufacturing America's finest pistols and rifles has made Kimber® the industry leader. Getting there required a true understanding of firearms and what people expect from them in the first place. Kimber is a company made up of shooters and hunters, where everyone believes quality is more important than anything else.

Virtually every part of every Kimber is manufactured from the finest raw materials in the state-of-the-art Kimber factory right here in America. Assembly and testing is done by practiced hands under the same roof. Quality is the true measure of value. Whether it means accuracy or dependability, the beauty of a finish or the precision fit between parts, quality is an integral component of every Kimber.

The Choice of America's Best.

The new Super Carry Ultra .45 ACP from the Custom Shop is the finest light weight concealed carry pistol ever offered by Kimber. Details begin on page 32.

Cover: Super Carry Custom .45 ACP and Model 84L Classic Select Grade .30-06 Spfd. Details begin on pages 32 and 44 respectively.

## Kimber Performance.

Kimber is the world's largest manufacturer of 1911 pistols. More law enforcement professionals, competition shooters and people who carry for personal protection choose Kimber than any other brand of 1911. LAPD® SWAT, LAPD® SIS and U.S. Marines carry Kimber. The U.S.A. Shooting Rapid Fire Pistol Team trains for both international and Olympic competition with a Kimber.

Kimber rifles are more of the same. They are favored by some of the world's most dedicated hunters, and Kimber tactical rifles have been backordered since the day they were introduced. The reason for all this is simple - Kimber pistols and rifles offer unsurpassed quality, dependability and performance. If you demand the best, Kimber is your only choice.

The new Model 84L Classic Select Grade weighs just 6 pounds, 2 ounces. Available in .25-06 Rem., .270 Win. and .30-06 Spfd., details begin on page 44.

# New Products

From the Custom Shop, the Super Carry Pro .45 ACP establishes a new, higher standard for concealed carry performance. Details on page 32.

The engraved Centennial Edition .45 ACP wears an elegant finish by Turnbull Restoration and rests in a presentation case. A limited edition, only 250 are offered.

The Ultra CDP II (LG) .45 ACP is loaded with important concealed carry features including Crimson Trace Lasergrrips. Details on page 28.

Weighing just 25 ounces, the Stainless Ultra TLE II .45 ACP has night sights and 30 lines-per-inch front strap checkering. Details on page 16.

Super Carry .45 ACP pistols from the Kimber Custom Shop take performance to the extreme. A light weight aluminum frame makes them easy to carry, and custom features like round heel and Carry Melt for smooth edges, night sights with cocking shoulder and KimPro II self-lubricating finish are standard. Details on page 32. To mark the 1911 centennial, the Kimber Custom Shop has created the Centennial Edition, an engraved .45 ACP with presentation case. Appointments include real ivory grips and a special finish by Turnbull Restoration. Only 250 will be offered. Complete details are available at [www.kimberamerica.com](http://www.kimberamerica.com).

Ultra TLE II, Stainless Ultra TLE II and Stainless Pro TLE II pistols in .45 ACP blend light weight and shorter barrels for easier carry with important features like night sights for faster aiming and front strap checkering for a secure grip. These models are also available with Crimson Trace Lasergrrips. The Ultra RCP II .45 ACP from the Custom Shop with trough sight, rounded edges and bobbed controls is highly specialized for backup carry. Details on page 34. Finally, the great Ultra CDP II from the Custom Shop is now available with Crimson Trace Lasergrrips. Complete information on Kimber pistols begins on page 6.

By combining classic features and precision in a true light weight package, the Model 84L creates a new benchmark for sporting rifles. The numbers are impressive. Weight is just 6 pounds, 2 ounces – even with a 24-inch barrel for optimum velocity – and magazine capacity is a surprising 5 rounds. The Classic model with hand-finished walnut stock is available in .270 Win. and .30-06 Spfd. The Classic Select Grade adds a French walnut stock with ebony forend tip, along with a third chambering – the flat-shooting .25-06 Rem. Standard features include match grade barrel, chamber and trigger. Details begin on page 44.

With a match grade barrel and hand-finished walnut stock, the Model 84L Classic is chambered in .270 Win. and .30-06 Spfd. Details on page 44.

The Model 8400 Patrol .308 Win. has a 20-inch match grade barrel for fast handling, plus many other refined tactical features. Details on page 56.

Riding on Kimber's reputation for outstanding accuracy, tactical rifles have been backordered since they were introduced. New this year is the Model 8400 Patrol in .308 Win. A 20-inch barrel permits fast deployment and makes it easy to carry. Model 8400 WSM rifles are now available in the Classic Stainless configuration with fine walnut stocks and stainless steel barreled actions. Model 84M Pro Varmint rifles have been upgraded with new features, including heavier barrel and beavertail forend. Finally, the Model 8400 Caprivi is chambered in .416 Rem. Mag. Complete information on Kimber rifles begins on page 38.

# Pistols

Quality is the true measure of value. On the strength of quality, Kimber has become the world's largest producer of 1911 pistols. Compare a Kimber with any other brand of 1911 – or any other type of semi-automatic pistol – and see for yourself why Kimber is the choice of America's best.

View a presentation on Kimber pistols  
at [www.kimberamerica.com](http://www.kimberamerica.com)

Like all Kimber pistols, the Ultra CDP II .45 ACP (left) has a barrel machined from solid steel to match grade dimensions. This ensures unequalled accuracy. Short, light and absolutely dependable, it is the very definition of the ideal concealed carry pistol. Details on page 28.

All chambers are cut to match grade dimensions so each pistol can realize its accuracy potential. Ejection ports are lowered and flared so ejecting brass clears easily.

With a pull weight of 4-5 pounds, Kimber match grade triggers break crisp and clean. There is no long take-up, heavy pull or overtravel common to other semi-automatic designs.

Kimber pistols feature premium fixed, adjustable or night sight sets securely mounted in dovetails machined into the slide. All Kimber sights are steel for durability.

Kimber builds the world's finest 1911 pistols right here in America; something that makes sense as few things are more American than a 1911 .45 ACP. Virtually every critical component of every pistol is manufactured inside the Kimber factory. The finest raw materials come through the front gate and Kimber does the rest, the only way to ensure that every part meets unequalled standards.

America's best shooters keep choosing Kimber. Legendary LAPD® SWAT tested five major 1911 brands and chose Kimber. United States Marines assigned to Special Operations Command chose Kimber. The U.S.A. Shooting Rapid Fire Pistol Team trains for Olympic competition with a Kimber. Most recently, LAPD® SIS transitioned to Kimber. They all chose Kimber for the same reasons; quality, dependability and accuracy. So should you.

Complete descriptions of each Kimber 1911 are presented in the following pages, and a network of Kimber Master Dealers across America stand ready to assist you in selecting the best model for your particular needs. To locate the nearest dealer, for the most recent information on new models or to view a complete selection of product videos, visit [www.kimberamerica.com](http://www.kimberamerica.com).

The Team Match II was developed at the request of the U.S.A. Shooting Rapid Fire Pistol Team to train for Olympic competition. Available in both .45 ACP and 9mm, it is one of the finest and most dynamic pistols offered by Kimber. Details on page 12.

Accuracy and dependability right out of the box. Made in America. The choice of America's best shooters. Kimber is the most popular 1911 pistol in the world and Kimber quality is unequalled by any other manufacturer. The Custom family is where it all began.

All Kimber pistols in centerfire calibers have a Loaded Chamber Indicator Port.™ When a round is chambered and light is available, the shell casing should be visible through the slot at the rear of the barrel hood.

All slides and frames are paired in the early stages of production and travel through the factory together, ensuring optimal fitting of every part. This is one reason Kimber pistols deliver unequalled performance and dependability.

Custom features like high ride beavertail grip safety, extended thumb safety and Commander-style hammer are part of every Kimber pistol. All parts are made inside the Kimber factory, ensuring unsurpassed quality control.

The Kimber Custom sets the performance standard for production 1911 pistols. Models are offered with a choice of fixed, adjustable or night sights, and in matte or polished finishes. Both carbon steel and stainless steel versions are available. Common features include the Kimber Firing Pin Safety,™ designated by "IP" in the model name, along with rounded and blended edges for comfortable carry. Barrels, barrel bushings, chambers and triggers are all machined to exacting match grade dimensions. Ejection ports are lowered and flared, and sights are mounted in dovetails machined into the slide. Chamberings include .45 ACP, 9mm, 10mm and 38 Super.

**Features:**

- Match grade barrel is machined from a single piece of solid steel for accuracy and long life.
- Enlarged firing pin stop locks the extractor in position for absolute reliability.
- Slightly extended checkered magazine release button speeds operation.
- All Kimber pistols feature a beveled magazine well for quick and positive loading.
- All Kimber pistols feature a polished breech face for flawless feeding and extraction.

A complete listing of specifications and features begins on page 58.

Good company. LAPD® SWAT carries Kimber. So do United States Marines, thousands of law enforcement officers and hundreds of thousands of American shooters who refuse to compromise with a lesser pistol than a 1911 – or a lesser 1911 than a Kimber.

Pistols in the TLE and Warrior families feature three dot (green) Meprolight® night sights. TLE pistols have the sleek Kimber Low Profile Combat™ sights while Warriors have the Tactical Wedge™ design.

Warrior and Desert Warrior pistols have Kimber G-10 grip panels and a traditional lanyard loop. Other standard Warrior features include a short or military-length guide rod, along with a bumped and grooved beavertail grip safety.

Warrior and Desert Warrior pistols wear the KimPro II® finish. Both tough and self-lubricating, KimPro II has outstanding resistance to chemicals, moisture, salt and UV light that can break down other finishes.

TLE and Warrior models are more than line extensions. Each pistol was created in cooperation with law enforcement and military professionals who insisted on a Kimber Custom with specialized features. The TLE – Tactical Law Enforcement – represents the ideal 1911 for duty, carry or personal protection. Both carbon steel and stainless steel versions are available, each with the option of a Kimber Tactical Rail. Warrior and Desert Warrior models go a step further, adding the KimPro II finish and Tactical Wedge night sights, along with traditional military features like short guide rod and lanyard ring. Naturally, TLE and Warrior models are all chambered in .45 ACP.

In addition to those listed on pages 8-9, TLE and Warrior pistols have the following features:

- Three dot (green) dovetail-mounted night sight sets, low profile for TLE pistols and Tactical Wedge™ for Warriors.
- RL and Warrior models have an integral Kimber Tactical Rail™ for accessory mounting.
- TLE models feature 30 lines-per-inch front strap checkering.
- Warrior models wear the premium KimPro II finish for enhanced resistance to the elements, along with Kimber G-10 grips, ambidextrous thumb safety and lanyard ring.

A complete listing of specifications and features begins on page 58.

Raise your sights. Gold Match and Team Match pistols share many features with the Custom family, but take quality to the extreme. They are the apex of production 1911 performance. These pistols are the choice of shooters who will not settle for anything less than the best.

All Kimber 1911 pistols have a beveled magazine well that aids quick reloading by guiding the magazine into the frame. Special hex-head screws underscore the elegance of premium Kimber grips.

Gold Match and Team Match models feature extended ambidextrous thumb safety levers, dovetail-mounted adjustable sights with positive steel-on-steel click adjustments and high-ride beavertail grip safeties for positive control.

The Team Match II was commissioned by the U.S.A. Shooting Rapid Fire Pistol Team to train for Olympic competition. Kimber is the largest donor of any firearms company in Team history, contributing \$750,000 to date.

The Gold Match II and Stainless Gold Match II are the finest production pistols offered by Kimber. Both feature a stainless steel match grade barrel that is machined oversized and then fitted by hand in the Custom Shop for accuracy. All flat surfaces are polished to a high shine that contrasts satin over the curves. The Team Match II is an “all go” version of the Stainless Gold Match, designed specifically for the U.S.A. Shooting Rapid Fire Pistol Team to use in action shooting competitions at national and international levels. Unique Team Match II features include 30 lines-per-inch front strap checkering and extended magazine well.

**Features:**

- Tuned to break crisp at 4-5 pounds, the Premium Aluminum Trigger™ is standard on all Gold Match and Team Match pistols.
- All Gold Match and Team Match pistols have an ambidextrous thumb safety and adjustable rear sight.
- Team Match models have an extended magazine well, 30 lines-per-inch front strap checkering and U.S.A. Shooting Team red, white and blue logo grips.
- An 8-round magazine is standard on Gold Match and Team Match .45 ACP pistols. 9mm models have magazines with 9-round capacity.

Gold Match II™	.45 ACP
Stainless Gold Match II™	.45 ACP, 9mm
Team Match II®	.45 ACP, 9mm

The Gold Match II .45 ACP is the finest production pistol offered by Kimber, and quite possibly the finest production 1911 pistol ever made. It is extremely accurate and tuned for absolute dependability.

Gold Match II

Stainless  
Gold Match II

Team Match II

A tribute to attributes. Specialized features are the hallmark of the Compact and Pro Carry families. Some have shorter grips and light weight aluminum frames – even night sights and the Kimber Tactical Rail. All have shorter 4-inch barrels that make them easy to carry.

Compact and Pro Carry pistols have 4-inch bushingless match grade bull barrels fitted directly to the slide. Chambers and triggers are also match grade. They are easier to carry and conceal, and are perfectly balanced.

Like some full-size Kimber pistols, both Pro Carry RL models have an integral Picatinny rail for light mounting. Along with TLE and designated night sight models, they also have Meprolight® night sights.

All Kimber pistols have slide serrations with beveled edges that will not snag clothing or holsters. Serrations are deep and wide to ensure positive grip even with wet or cold hands.

Chambered in .45 ACP, 9mm and 38 Super, Kimber mid-size pistols are an ideal compromise of size and weight. With a variety of options and features, they cover every need from duty and concealed carry to home defense. More importantly, these pistols do not compromise quality or dependability. The Tacoma, Washington, P.D. extensively tested Pro Carry models, finding them to be the most dependable firearm put through the paces in over 20 years. They checked the records, comparing Kimber not only with other pistols, but rifles and shotguns as well. When you carry a Kimber, you carry with absolute confidence.

**Features:**

- Pro Carry II, Pro TLE II and Pro TLE/RL II models have steel slides. All other Compact and Pro slides are stainless steel.
- Pro Carry HD II, Stainless Pro TLE II and Stainless Pro TLE/RL II models have stainless steel frames.
- Compact Stainless II now has a light weight aluminum frame.
- Ramped match grade barrels with match grade chambers are standard on 38 Super and 9mm models.
- All Compact and Pro pistols use the proven single recoil spring design.

Stainless Pro TLE/RL II

Size matters in a concealed carry pistol. Reduced dimensions and light weight are as important as magazine capacity and power. Kimber Ultra Carry pistols in .45 ACP and 9mm have it all, and put it together in a 1911 package that simply outperforms any other type of semi-automatic.

Ultra Carry II pistols weigh just 25 ounces; 13 ounces less than a full-size 1911. Combining light weight with a 3-inch barrel and short grip makes them easy to carry and conceal.

Attention to every detail is another reason Kimber quality is unsurpassed. Machined bevels at both the front and rear of the Ultra Carry ejection port ensure ejecting brass reliably clears, avoiding jams common to other brands.

All Kimber pistols feature a match grade barrel, chamber and trigger. Ultra Carry bull barrels are fitted directly to the slide, keeping maximum weight forward to reduce recoil and speed sight recovery time between shots.

To ensure dependability, Ultra Carry light weight aluminum frames are machined on the same computer-driven machines and to the same unequaled tolerances as Kimber steel frames. Each model has standard Kimber features like rounded and blended edges, beveled magazine well, extended thumb safety and bumped beavertail grip safety. Magazine capacity is 7 rounds in .45 ACP. They fit almost any size hand and point naturally. Best of all, the crisp, clean single action trigger eliminates long travel, heavy pull and the guessing that goes with it. For concealed carry, nothing beats a 1911 – and no 1911 beats a Kimber.

**Features:**

- Shorter grip length makes Ultra Carry pistols easy to carry and conceal. Magazine capacity remains 7 rounds even in .45 ACP.
- Frames machined from solid bricks of 7075-T7 aluminum have been tested to over 20,000 rounds without meaningful wear.
- The Ultra Carry slide has the longest cycle time of any small 1911 pistol, ensuring unequaled reliability.
- TLE models have dovetail-mounted night sights and 30 lines-per-inch front strap checkering.

Carry light. Crimson Carry .45 ACP pistols have light weight aluminum frames for easy all-day-every-day carry. Crimson Trace Lasergrips project a red dot that is visible in virtually any light, a tremendous psychological and tactical advantage that also promotes speed and accuracy under stress.

Crimson Carry pistols feature Crimson Trace Lasergrips in an exclusive rosewood finish with the classic 1911 double diamond checkering pattern and the Kimber logo. Lasergrips promote faster shooting, positive target acquisition and are a tremendous training aid.

Custom touches include a recessed slide stop pin and elegant two-tone non-reflective finish. Crimson Carry frames are machined from solid bricks of premium aluminum – dramatically reducing weight for easier carry. Match grade triggers break crisp and clean.

Little things make a big difference in performance. Kimber pistols are enhanced with custom features like an extended thumb safety lever with deep serrations for positive grip and Commander-style hammers that will not cut or snag.

Having confidence in a carry pistol is critical. Dependability and accuracy proven through repeated practice increases confidence. Crimson Trace Lasergrips project a bright red dot downrange, an important aid in training. Reading the dot immediately shows the advantage of proper grip and trigger control, which can dramatically improve accuracy and reduce time between shots for any level of shooter. Crimson Carry pistols come with Crimson Trace Lasergrips; the finest laser sight available today. Combining that advantage with Kimber quality makes Crimson Carry pistols an unbeatable value. Offered in three sizes, they are ideal for law enforcement, home defense or concealed carry.

**Features:**

- The Custom Crimson Carry II has a 5-inch match grade barrel and match grade barrel bushing.
- The Pro Crimson Carry II and Ultra Crimson Carry II have bushingless match grade bull barrels fitted directly to the slide.
- Crimson Trace Lasergrips are activated by a pressure pad just below the trigger guard at the front of the grip.
- Lasergrips are a \$369 value when purchased separately. They are powered by two #2032 lithium batteries with over 4 hours run time.

Ready for anything. Kimber Tactical pistols have the performance-enhancing features demanded by law enforcement professionals. Available in a range of configurations, they cover everything from tactical response to concealed carry. All are available in .45 ACP, and the Tactical Pro II is also offered in 9mm.

Tactical Ultra II, Tactical Pro II and Tactical Custom II have aluminum frames for easier carry. Tactical Custom HD II and Tactical Entry II have heavier stainless steel frames. The Tactical Entry II incorporates the Kimber Tactical Rail™.

Tactical pistols have a Premium Aluminum Trigger from the Kimber Custom Shop set to break clean at 4-5 pounds. Double diamond logo laminated wood grips with bordered checkering pattern, along with checkered front strap and trigger guard belly are standard.

All Tactical pistols are outfitted with custom features like extended and beveled magazine well for positive speed reloading, plus an ambidextrous thumb safety. Slides and small parts are finished in matte black to contrast with charcoal gray KimPro II frames.

Meprolight night sights – standard. Front strap and trigger guard checkering – standard. Extended ambidextrous thumb safety – standard. Kimber Tactical pistols are no-compromise, purpose-built pistols that leave nothing out, and Kimber quality brings it all together in five different platforms. Three full-size versions exceed all traditional and tactical law enforcement requirements. Compact models cover everything else. Like all Kimber pistols, each has rounded and blended edges to prevent snagging, along with match grade barrels, chambers and triggers. No other pistol design equals the 1911 for true tactical performance; and no 1911 brand matches the quality and dependability of Kimber.

**Features:**

- All Tactical pistols have checkered front strap, extended magazine well and night sights.
- Tactical Custom II, Tactical Custom HD II and Tactical Entry II have 5-inch match grade barrels.
- Tactical Pro II and Tactical Ultra II have bushingless match grade bull barrels.
- Tactical Pro II in 9mm and the Tactical Ultra II have ramped match grade barrels.

Elegance. Hard to define but easy to recognize, elegance is a true measure of quality. Kimber Eclipse pistols have a brush-polished finish over a stainless steel slide and frame, both accented with black small parts. More importantly, they perform as good as they look – and that is a bold statement.

All Eclipse pistols have Meprolight night sights. The Eclipse Target II and Eclipse Pro Target II have an adjustable bar/dot night sight system. All other models have fixed, low-profile three dot (green) night sights securely mounted in dovetails.

All Kimber pistols have beveled slide serrations that will not snag. The brush-polished Eclipse finish combines with matte black small parts to create a stunning appearance, and the stainless steel slide and frame ensure resistance to the elements.

Eclipse pistols feature 30 lines-per-inch front strap checkering from the Kimber Custom Shop for a positive grip, even with cold or wet hands. Laminated gray/black grip panels are checkered in the traditional double diamond pattern and compliment the finish.

The true beauty of Eclipse pistols is in their performance. Match grade barrels and triggers ensure the level of accuracy that made Kimber the world's most popular 1911. All are chambered in .45 ACP and the Eclipse Custom II is also available in the powerful 10mm. Breech faces are polished for dependable feeding, and slide and magazine releases are checkered for fast, reliable operation. The Eclipse Pro Target II is the only 4-inch Kimber with an adjustable sight, and the Eclipse Ultra II is the only 3-inch Kimber with a stainless steel frame. Still, performance never looked this good.

**Features:**

- Eclipse Target II and Eclipse Pro Target II have an adjustable bar/dot night sight system.
- Eclipse Ultra II, Eclipse Pro II and Eclipse Custom II have fixed three-dot (green) night sights.
- Eclipse Target II and Eclipse Custom II have stainless steel match grade barrel bushings. Other models have bushingless match grade barrels.
- The Eclipse Ultra II and the Eclipse Custom II in 10mm have ramped match grade barrels.

A shot in the dark. Covert pistols have Tactical Wedge night sights and Crimson Trace Lasergrrips. If you can see, you can aim. Light weight aluminum frames make them easy to carry, and Kimber quality ensures absolute dependability—even when the lights go out.

Covert frames are coated in Desert Tan KimPro II™ a premium finish that is durable, self-lubricating and extremely resistant to the elements. Black matte slide and small parts give each pistol a dynamic appearance.

Tactical Wedge night sights, 30 lines-per-inch front strap checkering and beavertail grip safety are standard on all Covert models. The Custom Covert II and Pro Covert II both have a lanyard ring and a magazine with extended bumper.

Covert pistols are made in the Kimber Custom Shop, where they are fit and finished by hand. Crimson Trace Lasergrrips in a digital camouflage pattern with Kimber logo offer critical tactical and training advantages.

Built in the Kimber Custom Shop, Covert pistols are a perfect blend of light weight and tactical features. Front strap checkering in a new 30 lines-per-inch pattern with bordered base ensures a positive grip, and the Carry Melt treatment rounds and blends edges so they will not hang up on clothing or holsters. Standard Kimber features like match grade barrel, chamber and trigger, beveled magazine well and bumped and grooved grip safety boost accuracy and speed. Three sizes are offered, covering everything from duty to personal protection and even backup. Carry a Kimber Covert, and don't be afraid of the dark.

**Features:**

- Covert frames machined from 7075-T7 aluminum have been tested to over 20,000 rounds without meaningful wear.
- Tactical Wedge™ three dot (green) night sights and digital camouflage Crimson Trace Lasergrips with Kimber logo are standard.
- Custom Covert II and Pro Covert II have a lanyard ring and a magazine with extended bumper.
- Covert frames have 30 lines-per-inch front strap checkering with bordered base.

Less is more. Many shooters with small hands are forced to carry a revolver for self defense because the grip of a semi-automatic is too large. Enter the Aegis, a 9mm pistol that combines the real-world advantages of a 1911 in a platform with a smaller grip.

Aegis pistols have thin ball-milled rosewood grips, 30 lines-per-inch front strap checkering and a high cut under the trigger guard. Even small hands can get a proper grip, and the 9mm is easy to control under recoil.

Wide slide serrations, bobbed thumb safety and smooth magazine release button are some of the Custom Shop features that make Aegis pistols ideal for true concealed and backup carry.

Tactical Wedge three dot (green) Meprolight night sights transition perfectly into the flat top of the Aegis slide. Ramped match grade barrels, chambers and solid triggers are standard.

Small, light and accurate pistols get carried. Bulky guns get left home. Light weight, compact and absolutely reliable, Aegis models are built in the Kimber Custom Shop for shooters with small hands. Thin grips, altered controls and rounded edges make them easy to shoot. A great single-stage 1911 trigger that breaks clean at 4-5 pounds makes them easy to shoot accurately. Standard features include night sights, 30 lines-per-inch front strap checkering and a premium 2-tone KimPro II finish that is both self-lubricating and extremely resistant to moisture. Self defense is no place to compromise. Carry the best. Carry a Kimber Aegis.

**Features:**

- Aegis frames are machined from 7075-T7 aluminum and have been tested to over 20,000 rounds without meaningful wear.
- Aegis pistols have a Carry Melt treatment for rounded and blended edges that will not cut or snag.
- Tactical Wedge three dot (green) night sights are dovetail-mounted to ensure integrity.
- Ramped match grade barrels are machined from solid steel.
- Flat top slides, bobbed thumb safety, bumped and grooved grip safety and front strap checkering are standard.

Custom Aegis II

Leave nothing to chance. Kimber CDP – Custom Defense Package – pistols combine the most popular carry features into a package that gives them their name. Adding these features while the pistols are being built in the Custom Shop reduces their price by over \$500 and gives them their incredible value.

CDP pistols have 30 lines-per-inch checkering on the front strap and under the trigger guard for a positive grip with wet or cold hands. Standard features include ambidextrous thumb safety and Premium Aluminum Trigger.

CDP pistols are made entirely in the Kimber Custom Shop. Standard features include low-profile three dot (green) night sights and a Carry Bevel treatment that rounds and blends edges so they cannot snag on clothing or holsters.

CDP pistols are chambered in the powerful .45 ACP, what many consider the finest cartridge ever developed for law enforcement and personal defense. The Ultra CDP II is also available in 9mm.

CDP pistols have it all. Night sights, ambidextrous thumb safety and 30 lines-per-inch checkering on the front strap and under the trigger guard. Match grade barrel, stainless steel slide and double diamond rosewood grips. They even have a 7075-T7 aluminum frame with KimPro II finish and Carry Melt treatment for rounded and blended edges that will not snag. Five .45 ACP models weighing just 25 to 31 ounces are offered. The Ultra CDP II with a 3-inch barrel is available in 9mm as well. Kimber makes the finest 1911 pistols manufactured today, and nowhere is quality more important than in a pistol carried for personal defense.

**Features:**

- The Custom CDP II has a 5-inch match grade barrel fitted to a stainless steel match grade barrel bushing.
- Ultra CDP II, Compact CDP II and Pro CDP II models have match grade bull barrels fitted directly to the slide without a bushing.
- The Ultra CDP II in both .45 ACP and 9mm has a ramped 3-inch match grade bull barrel. The .45 ACP is also available with Crimson Trace Lasergrips.
- All CDP pistols feature a stainless steel slide, night sights, Carry Melt treatment and checkered front strap.

Cure for the common pistol. Built in the Kimber Custom Shop, Raptor .45 ACPs take their name from dynamic slide and frame serrations, feathered logo grips and finish accents. While the design theme is unique, performance is exactly what shooters expect from Kimber—unequaled.

All Raptor pistols are chambered in .45 ACP. Each model has an ambidextrous thumb safety, scaled slide serrations and Tactical Wedge night sights. The Grand Raptor II has an adjustable bar/dot night sight system.

Raptor pistols have a flat top slide with a back-cut feathered row of scales running the full length. Made entirely in the Kimber Custom Shop, Raptors retain standard Kimber features like match grade barrel, chamber and trigger.

Raptor pistols have unique grips with a bordered scale pattern that carry the design theme (Patent D560750S). Grand Raptor II grips (pictured) are rosewood, while other models have zebra wood grips. All models have scaled front straps.

Raptor .45 ACP pistols come in a variety of sizes and finishes, each loaded with Custom Shop features that ensure dependability and accuracy. Night sights, ambidextrous thumb safety, bumped and grooved grip safety and match grade barrel, chamber and trigger are standard. Ultra models have 3-inch barrels and aluminum frames, making them easy to carry and conceal. Larger models are available in either steel or stainless steel, making them ideal for everything from duty to competition and home defense. The quality of Kimber Custom Shop pistols is on par with that of America's top pistolsmiths. Pick up a Raptor. See for yourself.

**Features:**

- Raptor pistols have Tactical Wedge night sights. The Grand Raptor II has an adjustable bar/dot night sight system.
- Models with 3 and 4-inch barrels have a matte finish. Raptor II and Stainless Raptor II have brush-polished flats. The Grand Raptor II has highly polished flats.
- Raptor pistols have zebra wood grips. The Grand Raptor II has rosewood grips.
- Ultra Raptor II and Stainless Ultra Raptor II pistols have light weight 7075-T7 aluminum frames.
- Raptor pistols have scaled serrations on front strap and slide, and back-cut flat top slides.

The new standard of personal defense. Super Carry .45 ACP pistols are made in the Kimber Custom Shop to unequalled requirements of usability, dependability and performance. Light, powerful and loaded with the very best features for concealed carry, this is the pistol to have on your side.

Super Carry pistols have highly refined features like night sights with cocking shoulder, Carry Melt™ treatment for rounded edges that will not cut or snag and special beveled slide serrations for positive operation.

Custom Shop enhancements include recessed slide stop pin with surrounding bevel, high cut under trigger guard for better recoil control and aggressive front strap serrations that ensure a positive grip regardless of conditions.

Round heel frame configuration makes Super Carry pistols easier to conceal and more comfortable to carry. Serrated mainspring housing welds grip to palm, encouraging fast sight picture recovery between shots.

The Super Carry family was designed with a single purpose, to be the finest concealed carry pistols available today. Night sights, ambidextrous thumb safety and match grade trigger group are standard. Stainless steel slides and light weight aluminum frames wear KimPro II, a proprietary high-tech finish that is self-lubricating and extremely durable. The Super Carry Custom has a 5-inch stainless steel match grade barrel, the Super Carry Pro has a 4-inch bull barrel and the Super Carry Ultra has a 3-inch bull barrel plus a frame with shorter grip. Super Carry pistols combine dynamic style with outstanding quality and performance – just what you expect from Kimber.

**Features:**

- The Super Carry Custom has a 5-inch stainless steel match grade barrel and barrel bushing.
- The Super Carry Pro has a 4-inch bushingless bull barrel, while the Super Carry Ultra barrel is just 3 inches long and easier to conceal.
- All Super Carry frames are light weight 7075-T7 aluminum finished in KimPro II.
- All Super Carry slides are machined from stainless steel and finished in KimPro II.

Good enough is never good enough. Kimber Gold Combat models are superlative in every respect—from features to dependability to real-world performance. The Super Match II is the finest all-around Kimber ever offered, and the Ultra RCP II is unequaled for carry. If nothing but the best will do, look no further.

All Gold Combat models have herringbone-pattern Micarta grip panels, special 24 lines-per-inch front strap checkering with bordered base and a high cut under the trigger guard for best hand positioning during rapid fire.

Gold Combat models have flat top slides, fine cocking serrations and night sights with cocking shoulder for one-hand cycling if necessary. Scalloped French shoulders elegantly blend the bottom of the slide into the frame.

Gold Combats have 5-inch stainless steel bushingless match grade deep-crowned bull barrels. Ultra RCP II, Gold Combat II and Gold Combat RL II models wear the KimPro II finish. The Gold Combat RL II has the Kimber Tactical Rail.

The Super Match II .45 ACP is designed for action shooting or accuracy competitions, but most of them are carried for personal protection. Each one is guaranteed to have fired a 5-shot, 25-yard group measuring one inch or less center-to-center, and that kind of accuracy ensures confidence. Stainless steel slide, frame and barrel, checkered front strap and trigger guard belly, extended magazine well, adjustable sight and Premium Aluminum Trigger are standard. Along with the Ultra RCP II and Gold Combats, the Super Match II is produced in limited numbers by the Kimber Custom Shop. These five models are the finest 1911 pistols available today.

**Features:**

- Gold Combat models have night sights with cocking shoulder that allow cycling with one hand.
- Gold Combat models are the only 5-inch Kimber .45 ACPs with bushingless bull barrels.
- The Super Match II has an adjustable sight with positive steel-on-steel click adjustments.
- Gold Combat and Super Match II pistols have an extended beveled magazine well, plus checkering on front strap and under the trigger guard.
- The upgraded Ultra RCP II (Refined Carry Pistol) features a trough sight, rounded heel and full Carry Melt™ treatment for a smooth profile that will not cut or snag.

Just for fun. Shooting a 1911 chambered in .22 LR is great practice and an ideal way to train new shooters. It is also affordable. A Kimber conversion kit for an existing 1911 pays for itself in the first few hundred rounds.

Kimber rimfire pistols and conversion kits have adjustable, dovetail-mounted sights with steel-on-steel click adjustments. Standard features include match grade barrel and chamber. Slides and frames are aluminum for light weight.

Each Rimfire Super .22 LR is guaranteed to have fired a five-shot, 25-yard group measuring 1.5 inches or less. Actual test targets are packaged with each pistol.

Built in the Kimber Custom Shop, Rimfire Super pistols have front strap checkering, bordered rosewood grips, ambidextrous thumb safety and a serrated flat top slide with bold flutes.

Kimber rimfire pistols have the same features and unequalled performance as Kimber centerfires. Adjustable sight, bumped beavertail grip safety and extended thumb safety are standard. Aluminum slides and frames make rimfire pistols exceptionally light – ideal for young shooters. Conversion kits work with all Kimber .45 ACP pistols that have either 4 or 5-inch barrels and single stack magazines. They also fit most brands of 1911 pistols, provided they are mil-spec, single stack, and do not have a ramped barrel. (For fit information, call Kimber at 800-880-2418.) Conversion kits can be purchased directly from Kimber as they are not classified as a firearm.

**Features:**

- Kimber rimfire pistols and conversion kits are designed to fire only high velocity .22 LR ammunition.
- Rimfire Target Conversion Kits are packaged in a padded case. Each kit includes complete upper assembly and a 10-round magazine.
- Unlike centerfire 1911 pistols, rimfire slides do not lock open after firing the last round in the magazine.
- Conversion kits work with almost any brand of 1911 pistol, and easily install in about one minute.

A complete listing of specifications and features begins on page 58.

# Rifles

Only accurate rifles are interesting. True enough, but accurate rifles with hand-finished classic stocks, crisp triggers and action sizes designed specifically for the family of cartridges they chamber are something special. Only Kimber rifles offer these advantages. No other brand is their equal.

The all-new Model 84L Classic Select Grade in calibers like .270 Win. and .30-06 Spfd. weighs just 6 pounds, 2 ounces. Details begin on page 44.

View a presentation on Kimber rifles at [www.kimberamerica.com](http://www.kimberamerica.com)

All Kimber rifles feature match grade barrels and chambers, and are made entirely in the Kimber factory. Rigid quality control ensures exceptional accuracy.

Almost all Kimber rifles feature both pillar and glass bedding for accuracy and strength. Match grade triggers break sharp and clean at 3.5-4 pounds.

Kimber rifles all feature a positive 3-position wing safety with serrated lever, without question the finest design ever offered.

Full-length one-piece Mauser claw extractors lock cartridges in position for flawless feeding and extraction. This design is simply superior to common push feed actions.

Kimber was founded with the sole purpose of building the finest classic sporting rifles ever offered in America. Knowledgeable riflemen were quick to try one, liked what they saw and spread the word. Today, Kimber rifles are favored by many of the world's most accomplished hunters and shooters, and limited production keeps people standing in line to buy them.

Kimber rifles offer a combination of features that set them apart from all other production brands. Barrels, chambers and triggers hold critical match grade dimensions for accuracy. Pillar and glass bedding ensures both accuracy and strength. Walnut stocks are finished and checkered by hand, and Kevlar/carbon fiber stocks are the finest available on a production rifle. As with Kimber pistols, all work is done inside the Kimber factory – the only way to ensure quality.

Complete descriptions of Kimber rifles are presented on the following pages. Chambered in calibers from 204 Ruger to .458 Lott, and in a wide variety of models, one is ideal for any type of hunting, shooting or tactical law enforcement use. To locate the nearest Kimber dealer, for the most recent information on new models or to view a complete selection of product videos, visit [www.kimberamerica.com](http://www.kimberamerica.com).

Chambered in .308 Win., the new Model 8400 Patrol has a 20-inch barrel for quick deployment. It is one of five tactical models designed for military and law enforcement use. Details on page 56.

# Model 84M Rifles

Economy of scale. The Model 84M Montana .308 Win. weighs just over five pounds, yet still has a 22-inch match grade barrel to maximize velocity. The barreled action is machined from stainless steel and the hand-molded stock is reinforced with Kevlar/carbon fiber. Details are on the following pages.

The Model 84M action is designed with absolute minimal dimensions for the .308 Win. family of cartridges. This is the primary reason Model 84M rifles weigh some 2 pounds less than those from other manufacturers.

Model 84M actions are bedded to the stock on twin aluminum pillars for strength and accuracy. Models in big game calibers also have glass bedding. Sculpted steel bottom metal has a floorplate release inside the trigger bow.

Proper stock design and a recoil-absorbing 1-inch Pachmayr® Decelerator® recoil pad on most models diminish felt recoil. Straight comb stocks slide back, not up and into your cheekbone.

The Kimber Model 84M™ is the first ultra-lightweight production rifle that combines classic design, hand finishing and the advantages of a Mauser claw extractor for true controlled round feeding and extraction. Accuracy is ensured by the match grade barrel, chamber and trigger, along with pillar bedding on all models and glass bedding on rifles in big game calibers.

The Model 84M action was designed with minimal dimensions to accept the .308 Win. family of cartridges. No compromise was considered. Most production rifles simply shorten their bulky, full-size actions to accommodate these shorter cartridges, and their rifles end up weighing the same as a magnum. Worse, many do the only other thing they can to save weight; shorten the barrel below optimal length. That takes the rifle out of balance and reduces velocity.

The Kimber Model 84M Montana weighs just over 5 pounds, and the Model 84M Classic, Classic Stainless, Classic Select Grade and SuperAmerica weigh about 8 ounces more. Heavier rifles in varmint calibers are also available. Like all Kimber pistols and rifles, the Model 84M is built entirely inside the Kimber factory right here in America. The complete selection of Model 84M rifles is detailed on the following pages.

The Model 84M SuperAmerica is a spectacular rifle, with hand-polished bluing, AAA-grade claro walnut stock and 24 lines-per-inch checkering. Standard features include cheekpiece and ebony forend tip. Details are on the following pages.

Why weight? Model 84M rifles are available in eight calibers and ten models, one ideal for almost any type of deer, mountain game or varmint hunting. The constant is performance. Kimber rifles are exceptionally accurate, even though Model 84M sporters are the lightest production centerfires ever offered.

All Kimber rifles feature match grade barrels with match grade chambers and target crowns for exceptional accuracy. Barrels are optimum length to maximize velocity and maintain perfect balance, not cut to save weight.

The Model 84M is the lightest production hunting rifle available today. The Model 84M Montana .308 Win. weighs just 5 pounds, 2 ounces. Models with walnut stocks weigh just 8 ounces more.

Kimber rifles with walnut stocks have a hand-rubbed oil finish, and either 20 or 24 lines-per-inch hand-cut checkering. Classic Select Grade and SuperAmerica models also have ebony forend tips.

#### Features:

- Three-position wing safety acts directly on the cocking piece for greatest security.
- Models with walnut or Kevlar/carbon fiber stocks are glass bedded at the recoil lug.
- Models with walnut or laminated stocks have sculpted steel bottom metal with floorplate release inside the trigger guard.
- Receivers are drilled and tapped for Kimber scalloped base sets (sold separately).

A complete listing of specifications and features begins on page 60.

Model 84M rifles are designed for two distinct purposes. Classic, Classic Stainless, Classic Select Grade, Montana and SuperAmerica models are light sporters made for hunting North America's big game. Available in a wide selection of popular calibers, they are the finest mountain rifles offered today. Varmint, LongMaster Classic, Pro Varmint, SVT and LongMaster VT are available in several flat-shooting varmint calibers. Lighter models are designed for predator calling and walking long distances between stands. Heavy-barreled models are for wearing out your welcome at a prairie dog town. Model 84M rifles are unequaled by any other production rifle, no matter how you weigh the options.

The upgraded Model 84M Pro Varmint has an ultra-stable laminated stock with beavertail forend for riding the bags. Now with a stainless steel action and a longer tapered and fluted match grade barrel, it is chambered in 204 Ruger, .223 Rem. and .22-250 Rem.

# Model 84L Rifles

The Model 84L Classic is a new category of hunting rifle, one blending true light weight and accuracy with America's favorite calibers like .270 Win. and .30-06 Spfd. Features include a 3-position wing safety, Mauser claw extractor and match grade barrel. Details are on the following pages.

Model 84L rifles weigh just 6 pounds, 2 ounces. Even then, the match grade barrel is still 24 inches long for maximum velocity. The Model 84L does not compromise accuracy or velocity to save weight.

The Model 84L action follows the minimal dimensions of the Model 84M, but is slightly lengthened for standard calibers. Both Classic and Classic Select Grade models hold 5 rounds in the magazine plus 1 in the chamber.

The Model 84L features a full-length Mauser claw extractor for true controlled round feeding and extraction. The most dependable system ever developed, it prevents the double-feeding and jamming of common push feed actions.

There is no reason - at least no good reason - for a hunting rifle in .270 Win. or .30-06 Spfd. to weigh 8 pounds. Still they do, if only because that is the way things have always been done. Custom gunmakers learned long ago that hunters wanted lighter rifles, built them and charged accordingly. Until now, light rifles have come with a heavy price.

The Kimber Model 84L™ is a new category of rifle. Weighing only 6 pounds, 2 ounces, it offers the custom and performance features expected from Kimber at a production rifle price. A properly shaped classic walnut stock with 1-inch Pachmayr Decelerator pad diminishes felt recoil, and a full-length match grade barrel wrings every bit of velocity and accuracy out of America's favorite cartridges. Magazine capacity is 5 rounds, not 3 or 4, and both pillar and glass bedding stand up to the tough of the hunt.

The Model 84L Classic features a walnut stock and is available in .270 Win. and .30-06 Spfd. The Model 84L Classic Select Grade is a step up, with a French walnut stock and ebony forend tip. Chamberings include .25-06 Rem., .270 Win. and .30-06 Spfd. It took Kimber to get light right.

The Model 84L Classic Select Grade is available in .25-06 Rem., .270 Win. and .30-06 Spfd. The French walnut stock with ebony forend tip and hand-cut checkering establishes a new production rifle standard.

Some decisions weigh more heavily than others. A pound or two is not much at the gun counter, but it is the weight of the world at the top of a mountain. The Model 84L is the first production rifle to combine classic features, true light weight and performance with America's most favored hunting calibers.

Model 84L rifles have a match grade trigger that breaks crisp and sharp at 3.5-4 pounds, just right to think off the shot of a lifetime. The floorplate release is inside the trigger bow to prevent accidental opening.

Like all Kimber rifles, the Model 84L has a match grade barrel of optimum length for the cartridge it chambers. This ensures maximum velocity and the flattest possible trajectory.

Fine details speak loudly of quality – walnut mated perfectly with ebony or subtle inletting that gives a barrel its float. Attention to the smallest detail is a cornerstone of every Kimber rifle.

#### Features:

- Three-position wing safety acts directly on the cocking piece for greatest security.
- Actions are bedded on twin aluminum pillars for strength, stability and accuracy.
- Recoil lug is glass bedded to the stock for accuracy and strength.
- Match grade barrels are free floated to avoid accuracy-robbing pressure from the stock.

A complete listing of specifications and features begins on page 60.

Chambered in .270 Win. and .30-06 Spfd., the Model 84L Classic is pure Kimber. It features a full-length Mauser claw extractor, 24-inch match grade barrel, chamber and trigger, and a 3-position wing safety. The Model 84L Classic Select Grade goes a step farther, a French walnut stock with ebony forend tip setting it apart. In addition to .270 Win. and .30-06 Spfd., the Model 84M Classic Select Grade is also available in .25-06 Rem. All Model 84L stocks are carefully shaped, then checkered and finished by hand. These rifles have the between-the-hands balance of a fine shotgun and raise the bar so high they create a new category.

The Model 84L Classic is a hunter's rifle. Weighing just 6 pounds, 2 ounces in either .270 Win. or .30-06 Spfd., it is a pound or two less than other sporters. Even then, Kimber quality ensures unequalled reliability and accuracy.

# Model 8400 Rifles

Unequaled quality. Uncompromising performance. The Kimber Model 8400 SuperAmerica is the very pinnacle of production rifles. Chambered in a selection of WSM and magnum big game calibers, availability is limited due to the supply of suitable AAA-grade claro walnut. Details are on the following pages.

Kimber rifles are finished with great detail, but the SuperAmerica stands above all the rest. To complement the fine walnut stocks, bluing is hand-polished to a mirror finish.

Kimber stocks have an elegant, hand-rubbed oil finish that protects the wood while emphasizing the character and beauty of the grain. SuperAmerica models feature a traditional cheekpiece.

Hand-cut panel checkering at 20 lines-per-inch is a Kimber standard. SuperAmerica models have wrap-around 24 lines-per-inch checkering, along with an ebony forend tip.

The first Model 8400 was specifically designed for the Winchester Short Magnum (WSM) family of cartridges, but rifles with standard-length actions quickly followed. As with both the Model 84M and Model 84L, every dimension is minimized to keep the rifles light, sleek and balanced. At the same time, barrels are never shortened below optimum length so maximum velocity is retained. Five models with the shorter action are offered, and they are chambered in 270 WSM, 300 WSM and 325 WSM. Details are on the following page.

To accommodate America's most popular magnum big game calibers like .300 Win. Mag., .338 Win. Mag. and .375 H&H Mag., the Model 8400 action was lengthened. A total of seven sporting and four tactical models are now offered. Montana models with stainless steel barreled actions and Kevlar/carbon fiber stocks are light weight, hard-core mountain rifles. Classic, Classic Select Grade and SuperAmerica models are elegant walnut-stocked hunting rifles that perform as good as they look.

Models like the Sonora, Caprivi and Talkeetna have specialized features for long-range stand hunting or taking dangerous game up close. Tactical rifles are ready for law enforcement and military use right out of the box. WSM models are detailed on the following page, magnums follow on page 52, specialized models are on page 54 and tactical rifles are covered on page 56.

Model 8400 Montana rifles feature stainless steel barreled actions and premium Kevlar/carbon fiber stocks. Available in both WSM and magnum calibers, they are light, accurate and as tough as the hunt. Details are on the following pages.

Hunt like you mean it. Kimber Model 8400 WSM rifles are light weight but heavy on performance. Specifically designed around the shorter dimensions of the WSM case, each of the five models offers value unmatched by any other brand. Hunt with the best. Hunt with a Kimber.

To reduce weight, Kimber actions are designed with minimal dimensions for the family of cartridges they chamber. Model 8400 WSM Montana rifles weigh just over 6 pounds, and walnut-stocked versions only 8 ounces more.

Kimber rifles with walnut stocks have sculpted bottom metal and grip caps. Magazine release button is positioned inside the trigger guard to protect against accidental opening.

Kimber scalloped two-piece base sets transition perfectly into the receiver, complementing the sleek lines of each rifle. Polished blue, matte blue and stainless finishes are offered.

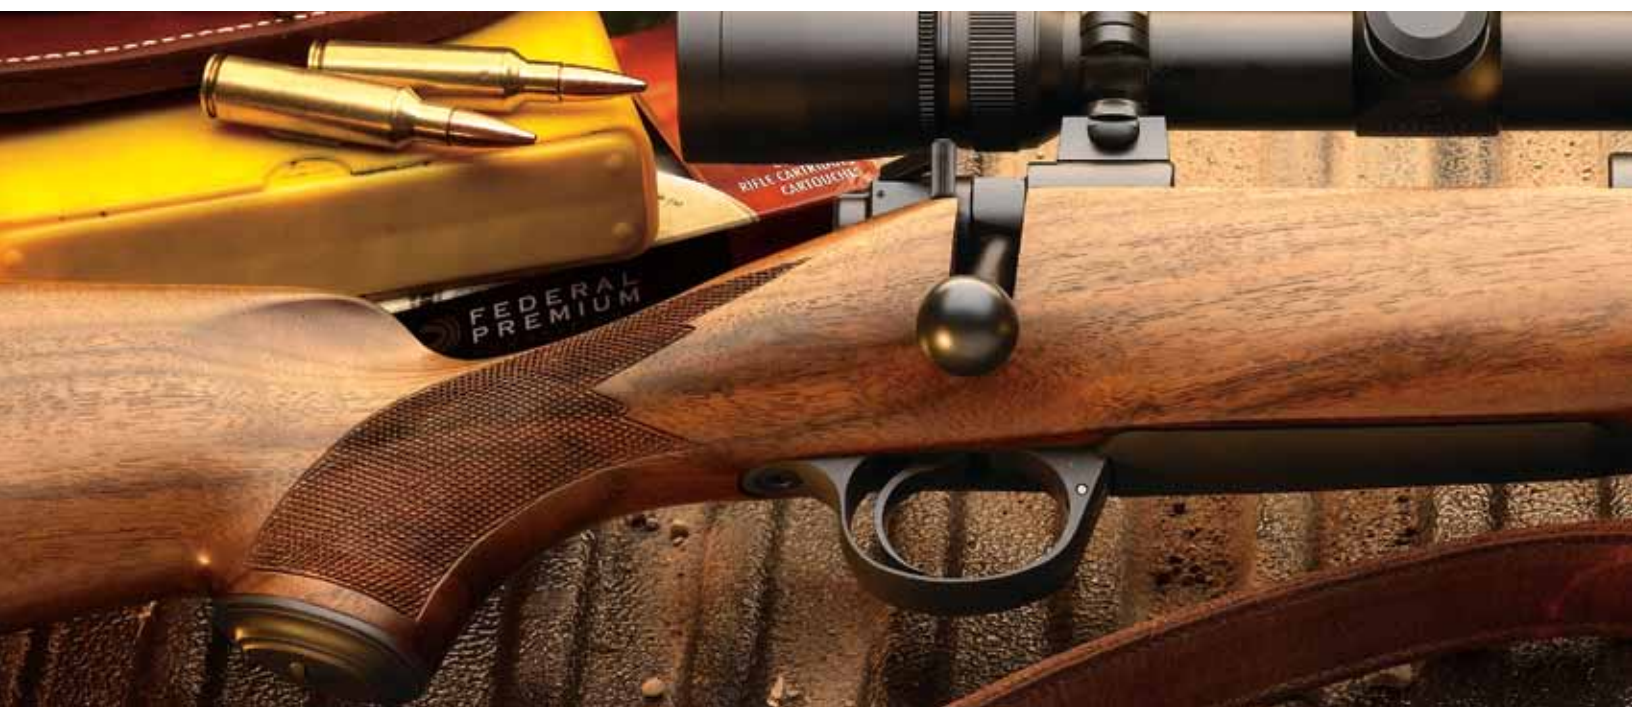

**Features:**

- Model 8400 rifles feature both pillar and glass bedding for superior strength and accuracy.
- Model 8400 rifles with walnut stocks have a sculpted floorplate with release button inside the trigger guard.
- Kimber scalloped base sets are available for all models (sold separately).

A complete listing of specifications and features begins on page 60.

Model 8400 rifles chambered for WSM cartridges feature free-floated 24-inch match grade barrels, chambers and triggers. Barreled actions are bedded on twin aluminum pillars permanently bonded into the stock, and recoil lugs are glass bedded for both strength and accuracy. Classic, Classic Stainless, Classic Select Grade and SuperAmerica models feature properly shaped classic walnut stocks with hand-rubbed oil finish and hand-cut checkering. Montana models are hard-core mountain rifles with stainless steel barreled actions and Kevlar/carbon fiber stocks. Straight combs and Pachmayr® Decelerator® pads dramatically reduce felt recoil. Made entirely in the Kimber factory, the Model 8400 is the finest production sporting rifle available today.

The Model 8400 Classic is designed with minimal dimensions specifically for the WSM family of cartridges. It is available in 270 WSM, 300 WSM and 325 WSM.

SuperAmerica™		270 WSM, 300 WSM
Montana™		270 WSM, 300 WSM, 325 WSM

Take the long shot out of long shots. Kimber rifles in America's most popular magnum big game calibers combine classic features with precision manufacturing. The result is unmatched accuracy and dependability. A hunting rifle is no place for compromise. Trust your next shot to Kimber.

Model 8400 rifles in magnum calibers carry 4 rounds in the magazine plus 1 in the chamber, an important advantage over other brands.

Kimber rifles have match grade barrels and chambers. Most Model 84M sporter barrels measure 22 inches, Model 84L and Model 8400 WSM barrels measure 24 inches and most Model 8400 magnum barrels measure 26 inches, optimizing velocity.

Model 8400 Montana rifles in .300 Win. Mag. and .338 Win. Mag. weigh just 6 pounds, 13 ounces - even with a 26-inch match grade barrel that ensures maximum velocity.

**Features:**

- Model 8400 rifles feature both pillar and glass bedding for strength and accuracy.
- Model 8400 rifles with walnut stocks have a sculpted floorplate with release button inside the trigger guard.
- Model 8400 rifles in 7mm Rem. Mag., .300 Win. Mag. and .338 Win. Mag. have 26-inch match grade barrels.
- Kimber scalloped base sets are available for all models (sold separately).

A complete listing of specifications and features begins on page 60.

Model 8400 rifles are now chambered in 7mm Rem. Mag. This flat shooter is a natural extension to the selection of popular calibers already offered across four models. Classic, Classic Select Grade and SuperAmerica rifles are traditional sporters with fine walnut stocks, hand-cut checkering and a hand-rubbed oil finish. The Montana is a hard-use rifle with a stainless steel barreled action and a Kevlar/carbon fiber stock. Made entirely in America, each rifle has a match grade barrel, chamber and trigger, both pillar and glass bedding, a 3-position wing safety and a Pachmayr® Decelerator® recoil pad. None are finer.

The Model 8400 Montana is available in canyon-shrinking calibers like .300 Win. Mag and .338 Win. Mag. Kimber rifles have match grade triggers that break clean at 3.5-4 pounds.

SuperAmerica™	.300 Win. Mag., .338 Win. Mag.
Montana™	.300 Win. Mag., .338 Win. Mag.

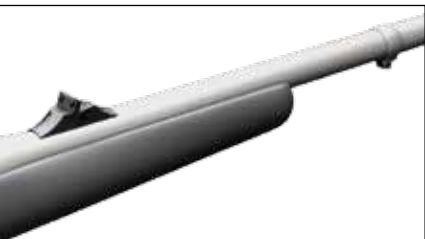

Big rifles for big game. Dangerous game rifles deliver unwavering dependability and charge-stopping energy. Long-range rifles put accuracy first. Kimber makes both kinds. The Caprivi is meant for Africa, the Talkeetna is tough enough for Alaska and the Sonora is ready for open country—all places where Kimber quality takes on new importance.

The Caprivi features a 3-leaf island rear express sight, the standing leaf regulated for 50 yards and both folders left green for custom regulation. The hooded front sight has a large bead, as appropriate.

The Sonora features a laminated stock with beavertail forend for resting on a sandbag or attaching a bipod. The fluted stainless steel match grade barrel retains a heavy sporter contour for both stability and accuracy.

Both the Caprivi and Talkeetna have a barrel band sling swivel stud. The Talkeetna features a single leaf express sight and has a premium Kimber Kevlar/carbon fiber stock.

**Features:**

- Model 8400 rifles feature both pillar and glass bedding for strength and accuracy. The Caprivi stock also has twin crossbolts.
- Caprivi and Sonora rifles have a sculpted steel floorplate with release button inside the trigger guard.
- Caprivi rifles have 3-leaf (1 standing and 2 folding) express sights. Talkeetna has an express sight with single fixed blade.
- Caprivi, Talkeetna and Sonora in .25-06 Rem. have 24-inch barrels. Sonora magnums have 26-inch barrels.

A complete listing of specifications and features begins on page 60.

The Model 8400 Caprivi is available in .375 H&H Mag., .416 Rem. Mag. and .458 Lott. Features include AA-grade French walnut stock with traditional pancake cheekpiece, ebony forend tip and 24 lines-per-inch hand-cut checkering. The Talkeetna .375 H&H Mag. has a stainless steel barreled action and tough Kevlar/carbon fiber stock. The Sonora is offered in .25-06 Rem., 7mm Rem. Mag. and .300 Win. Mag. Match grade barrels, chambers and triggers, a 3-position safety and the unequalled dependability of a full-length Mauser claw extractor are standard. These rifles are the finest production sporters ever offered, and the game they were designed to hunt deserves nothing less.

Caprivi

Talkeetna

Sonora

For stand hunters who value long-range accuracy above all else, the Model 8400 Sonora is chambered in .25-06 Rem., 7mm Rem. Mag. and .300 Win. Mag.

Sonora™	.25-06 Rem., 7mm Rem. Mag., .300 Win. Mag.

Sense of purpose. Kimber tactical rifles are built for real-world law enforcement and military use. Accuracy is paramount and absolute dependability is not negotiable. Each of the five models has specialized features for specific applications. All have match grade barrels, chambers and triggers.

Kimber tactical rifles feature extended bolt handles with enlarged knobs to aid operation under stress or with gloved hands. Triggers are match grade. Floorplate release buttons are inside the trigger guard.

Full-length Mauser claw extractor ensures true controlled round feeding and extraction for unequalled dependability. The 3-position wing safety is positive, quiet and fast into action.

Model 84M LPT, Model 8400 Tactical and Model 8400 Advanced Tactical can be ordered with premium accessory kits which include Leupold® scope, rings, and bipod. Details on page 66.

### Features:

- The Model 84M LPT (Light Police Tactical) has a laminated stock and 22-inch barrel.
- The Model 8400 Police Tactical has a laminated stock and heavy 24 or 26-inch fluted barrel.
- The Model 8400 Tactical has a McMillan stock and the Model 8400 Advanced Tactical has an adjustable McMillan stock.
- All tactical rifles have extended bolt handles with enlarged knobs.
- Patrol, Police Tactical, Tactical and Advanced Tactical models have 20 MOA rails.

A complete listing of specifications and features begins on page 60.

The Model 84M LPT is a light weight urban tactical rifle that places a priority on both portability and quick deployment. The new Model 8400 Patrol is chambered in .308 Win. A heavy 20-inch barrel retains accuracy and makes it easier to clear from a vehicle door or trunk. The full-size Model 8400 Police Tactical offers the stability of a laminated stock with beavertail forend, along with Kimber quality at a surprising price. Model 8400 Tactical and Model 8400 Advanced Tactical rifles are built by hand in limited quantities. Each features a trued bolt face, hand-finished chamber, hand-lapped lugs, custom glass bedding and a McMillan stock. The Model 8400 Advanced Tactical is finished in Desert Tan KimPro II for superior resistance to the elements.

The Model 8400 Police Tactical in .308 Win. and .300 Win. Mag. features a match grade barrel, chamber and trigger, 20 MOA rail and extended bolt handle with enlarged knob.

\*Weight can vary as much as 8 ounces due to natural variations in walnut density.

# Meprolight

Fixed night sight sets in a variety of colors are available for almost all popular pistol brands and models.

Adjustable night sight sets are available for Kimber, Colt, Glock, H&K, Ruger and Sig Sauer pistols.

Long gun sights fit AR-15 and AK-47 pattern rifles, as well as Remington models. Universal shotgun beads are also offered.

## Night Sights

Meprolight® night sights have established a worldwide reputation for exceptional brightness and durability. The first manufacturer of Tritium sights to receive the prestigious ISO 9002 certification, Meprolight is the sight of choice for many firearm manufacturers. Kimber, Glock, H&K, Kahr, Mossberg, Remington and Benelli trust Meprolight sights because they are the best.

Meprolight night sights are 20% brighter than other brands and they are backed by the strongest warranty in the business. Critical design features include light tubes that are sealed with a patented bonded process which makes them impervious to solvents and oils. Front dots are deliberately brighter than rear dots, encouraging focus on front sight and beyond. Meprolight is the right sight in any light.

View a presentation on Meprolight products at [www.kimberamerica.com](http://www.kimberamerica.com)

## Optical Sights

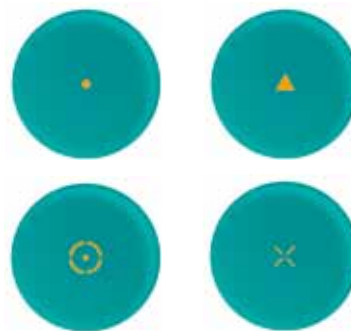

Meprolight® M-21 reflex sights deliver a bright, dependable aiming point and do not require battery power. Each has zero magnification, is parallax-free and fitted with a 30mm lens for fast target acquisition. In daylight, fiber optic cables capture ambient light and project a bright amber aiming point on the lens. Brightness self-adjusts to prevailing light conditions. In low light, the M-21 automatically transitions to Tritium power at the appropriate brightness. Meprolight reflex sights are battle-tested tough, and include a quick attach/detach mounting system that fits Picatinny rails. All come with a 10-year illumination warranty to the original purchaser.

Meprolight offers Tritium night sight sets that fit most popular pistols as well as AR-15 and AK-47 pattern rifles. Meprolight reflex sights mount on standard Picatinny rails and have quick-detaching bases.

Meprolight M-21 reflex sights do not require battery power. Finished in matte black, they offer 4 reticle options.

Reticle options include Dot (5.5 MOA), Triangle (12 MOA), Bullseye (30 MOA outside, 4.3 MOA dot) and Open X (21.5 MOA outside, 4.3 MOA center).

The MX-3 mounts behind the M-21 and provides 3X magnification.

Kimber pistols and rifles are shipped with a California-approved cable lock as a safety measure. Additionally, 1911 pistols are shipped in a lockable, high-impact case. Use of the cable lock is encouraged at all times when a firearm is in storage. Kimber owners may request a free cable lock by mail. Include \$10 for postage and handling, and mail your order to:

Kimber Service  
One Lawton Street  
Yonkers, NY 10705

Kimber firearms and Less-Lethal products should only be purchased and used in complete compliance with all laws; national, state, and local. All suggestions for use in this catalog, or in any Kimber literature, must be taken within the context of these laws. Customers and dealers are required to comply with all applicable laws.

All Kimber centerfire pistols now include the Loaded Chamber Indicator Port feature. When a round is in the chamber and light is available, the brass or silver color of the shell casing should be visible through the port in the barrel hood. This feature is another example of Kimber's commitment to firearm safety. However, one must never assume a firearm is unloaded until both the chamber and magazine are empty and the magazine is removed. Even then, all established rules of firearm safety must always be followed.

Firearm safety is every gun owner's responsibility. Use and store all firearms safely. Teach everyone in your home, especially children, proper firearm safety.

Kimber Less-Lethal products contain a strong irritant (inflammatory agent) derived from cayenne peppers. Avoid contact with skin and eyes. In case of contact, flush with water for at least 15 minutes. Seek immediate

medical attention if symptoms persist or worsen. Always keep Kimber Less-Lethal products out of the reach of children. There is a risk of injury to eyes if used at less than minimum safe distances specified in the product instruction manual. Kimber Less-Lethal products may be unlawful to own or possess in some states or jurisdictions. Check with your state and local authorities. Use of Kimber Less-Lethal products for any purpose except lawful self defense may be a crime. U.S. PAT. 6,951,070B2.

# Less-Lethal

**The new standard. Performance, ergonomics and award-winning innovation make Kimber Less-Lethal devices the finest money can buy. If you carry less-lethal, make sure you have the best. Make it a Kimber.**

Oleoresin Capsicum (OC) is the most effective inflammatory agent available today. Derived from the cayenne pepper plant, OC has overwhelming debilitating effects that immediately stop even the most violent attacks.

Kimber Less-Lethal devices use patented Jet Protector Technology® to deliver multiple blasts of exceptionally potent OC solution at extremely high speeds. The effect is immediate and lasts for up to 45-60 minutes.

With a longer effective range than conventional aerosol sprays, the JPX and PepperBlaster II stop threats at a safe distance. The JPX frame has a Picatinny rail for accessory mounting, and an integral laser sight is optional.

## Kimber Less-Lethal devices feature a revolutionary non-aerosol pyrotechnic delivery system.

After proving to be a tremendously effective tool in the hands of law enforcement professionals, literally hundreds of defensive pepper spray products have been introduced. A persistent problem with these products is that they are dispensed in 1950's hairspray-style canisters. Temperature-sensitive and difficult to aim, the slightest wind can blow these irritating sprays back into the user's face and make a bad situation worse. To solve this problem, Swiss engineers perfected a cutting-edge delivery technology that takes the potential of OC to a new level.

Kimber Less-Lethal devices feature a revolutionary non-aerosol pyrotechnic delivery system capable of accurate fire with enough force to wrap around glasses or even penetrate a face mask. A superior ingredient formulation combines a powerful solution of 10% OC (2.4% capsaicinoid content) with Benzyl alcohol for increased viscosity. Speed of delivery keeps blasts on target, reducing the risk of blowback or drift. PepperBlaster II and JPX also will not lose pressure over time like conventional sprays. When it comes to less-lethal protection, there is simply no more effective pepper device to have in your hand than Kimber Less-Lethal.

## The Most Advanced Pepper Technology.

The JPX™ Jet Protector® is the most consistently effective less-lethal delivery system available today. Far more powerful than conventional canister sprays, the unique JPX pyrotechnic delivery system shoots a concentrated jet of OC solution at 270 MPH; too fast for an assailant to avoid. The familiar firearm design promotes easy training and is safe to deploy. A removable magazine contains two independent charges and reloading is as simple as snapping a fresh magazine into place. The JPX is effective at ranges of 5–23 feet.

PepperBlaster® II reduces the same revolutionary delivery system into an affordable and highly portable device with an effective range of 2–13 feet. A perfect fit for almost any size hand, the PepperBlaster II conforms to a right or left-handed grip. Aiming is as easy as pointing a finger and a reserve blast is available if necessary. The PepperBlaster® II offers the added advantages of a pistol grip and sights for improved control and accuracy.

\*This number reflects the range of SelfClean™ magazines. Additional magazines styles are also offered.

Caution: Strong irritant. Keep out of reach of children. May be unlawful to own or possess in some states or jurisdictions. Use for any purpose other than lawful self defense may be punishable by imprisonment, fines or both. Guardian Angel protected by U.S. Pat. 6,951,070B2.

To see Kimber Less-Lethal products in action, visit [www.kimberlawenforcement.com](http://www.kimberlawenforcement.com) or [www.pepperblaster.com](http://www.pepperblaster.com).

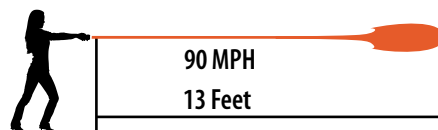

The new PepperBlaster II has the dependable operating system of the original PepperBlaster, plus a pistol grip with finger groove for control and a sight system that aids accuracy.

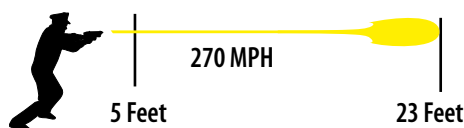

The JPX Jet Protector frame is constructed from tough fiberglass-reinforced nylon. Standard features include a Picatinny rail for mounting accessories or lights. An internal laser sight is also optional.

Replacement magazines for the JPX quickly snap into position. Both live and inert (training) magazines are available. Live magazines contain two powerful blasts of OC solution. Inert magazines contain two blasts of blue marker dye.

The PepperBlaster II is economical and disposable after use. Solution travels up to 13 feet in a fraction of a second, far too fast for an assailant to avoid.

With an 18-inch coverage area at 15 feet, the pattern of the JPX is subject-specific, making it a superior choice for law enforcement and corrections use.

## KimPro II® Premium Finish

KimPro II® is a proprietary high-tech firearm finish that is tough and self-lubricating. It offers outstanding resistance to a wide variety of chemicals, as well as UV light that can break down other coatings. KimPro II protects against the elements and resists abrasion to a much greater extent than conventional firearms finishes. Equally important, KimPro II is attractive, and the thin coating layer does not effect the operation of a firearm. KimPro II can be applied to aluminum, steel and stainless steel frames and slides, and is available in a wide variety of colors. A standard feature on many premium pistols and

Both the Desert Warrior and Custom Aegis II showcase the KimPro II finish.

Professional-grade accessory kits for Kimber Tactical Rifles are available for separate purchase. (Rifle sold separately. Model 8400 Advanced Tactical Kit pictured.)

## Custom Shop

The Kimber Custom Shop™ can quickly and professionally modify or personalize any Kimber 1911 pistol for carry, presentation or competition. Services include installation of adjustable or night sights, front strap checkering, carry melts and refitting with the Small Hands Package. Refinishing, barrel installation, trigger upgrading and a host of frame and slide modifications are available. The Kimber Custom Shop also offers the convenience of one-stop shopping for Kimber parts such as magazines, grips, conversion kits, spring kits and logo accessories.

## Rimfire Target .22 LR Conversion Kit

Kimber Rimfire Target™ conversion kits fit all Kimber .45 ACP pistols that have either 4 or 5-inch barrels and single stack magazines. They also fit many different brands of 1911 pistols. Field installation takes about one minute, and no modification or tools are required. Conversion kits are not classified as a firearm and can be purchased directly from Kimber. For additional information, see page 36.

## Tactical Rifle Kit

Model 8400 Advanced Tactical Kit includes Leupold® Mark 4® Long Range/Tactical 3.5-10x40mm in Dark Earth with M2 dials and TMR reticle, tactical ring set, Versa-Pod, tan sling with QD swivels, torque wrench, bits, cleaning kit and log book.

Long Range .30 Caliber Kit includes Leupold® Mark 4® Long Range/Tactical 3.5-10x40mm with M1 dials and TMR reticle, tactical ring set, black Pelican case, torque wrench, bits, Versa-Pod, black sling with swivels, cleaning kit and log book.

Medium Range .30 Caliber Kit includes Leupold® Mark 4® Medium Range/Tactical 2.5-8x36mm with M1 dials and TMR reticle, tactical ring set, black Pelican case, torque wrench, bits, Versa-Pod, black sling with swivels, cleaning kit and log book.

## Logo Gear

Kimber offers a wide variety of quality clothing and logo items, and the selection is continually expanding. Shirts, caps, jackets and shooting accessories are available in a full range of colors, styles and sizes.

### 1911 Magazines

Kimber magazines are available in an assortment of finishes and sizes – one for virtually any caliber or brand of mil-spec 1911. There is no better way to enhance the performance of any 1911 than with a Kimber magazine.

### 1911 Parts

The Kimber Custom Shop™ offers a variety of premium small parts including grip safeties, ambidextrous thumb safeties and extended magazine wells. Most parts are available in a variety of finishes.

### 1911 Grips

Kimber offers a full selection of premium 1911 grips and Crimson Trace Lasergrips that fit perfectly on every Kimber and almost any mil-spec 1911 pistol, regardless of caliber. Many feature hand-cut checkering and hand finishing. Premium hex head grip screw sets are also available.

### Tac-Mag

The KimPro® Tac-Mag® is the ultimate 1911 .45 ACP magazine. Tac-Mag magazines work with almost any brand and model of mil-spec 1911. Both 7 and 8-round versions are available for full-size frames, and a 7-round model is available for shorter frames like the Kimber Ultra. KimPro Tac-Mags feature an exclusive quick-change floorplate that permits the immediate attachment of one of three included bases – a conventional stainless steel plate, slim bumper pad for carry or a thick bumper pad for competition or use with extended magazine wells. Built for exceptional performance,

Tac-Mags are stainless

steel and have a Teflon-coated stainless steel follower. Rocket Wire springs are 25% stronger than conventional springs, ensuring fast and positive round presentation. Large round count recognition holes read at a glance. A KimPro Tac-Mag makes any 1911 better.

### 1911 Holsters & Magazine Carriers

A selection of fine leather holsters and magazine carriers with the Kimber logo are now offered for all 1911 pistols.

To order, please visit [www.kimberamerica.com](http://www.kimberamerica.com), call (914) 964-0742 or visit a Kimber Master Dealer.

## Accessories

Meprolight® night sights and optical sights, including premium fixed and adjustable Tritium night sights for most pistol, rifle and shotgun sights are available from Kimber. More information is on page 62, and a detailed catalog is available free from Kimber.

A selection of Kimber logo clothing, accessories, .22 LR conversion kits, Custom Shop parts and finishes, Less-Lethal products and Meprolight sights are showcased on pages 62-67. These items are available at [www.kimberamerica.com](http://www.kimberamerica.com) as well as at Kimber Master Dealer locations across America.

Kimber .22 LR conversion kits easily install on most brands of 1911 pistols. Installation is as simple as field stripping and takes about one minute. Conversion kits are manufactured to the same unequaled quality standard as Kimber pistols. Details on page 66.
